2. Introduction

This manual will explain how to make your own response file with the new Dewesoft installer and using that response file in your custom silent installation of Dewesoft.

3. Making a response file

The installer for Dewesoft X3 SP5 and newer versions allows the user to make a response file, which can be later used for silent installation of Dewesoft with options that were selected in the "recorded" installation.

To do this you need to write the following command in the command prompt:

```
Setup.exe -r (e.g. cmd> "C:\Users\Downloads\Dewesoft_X3_Installer_x86.exe" -r)
```

This command will launch the installer and "record" the steps which you selected in the installation (destination folder, setup type, selected features...).

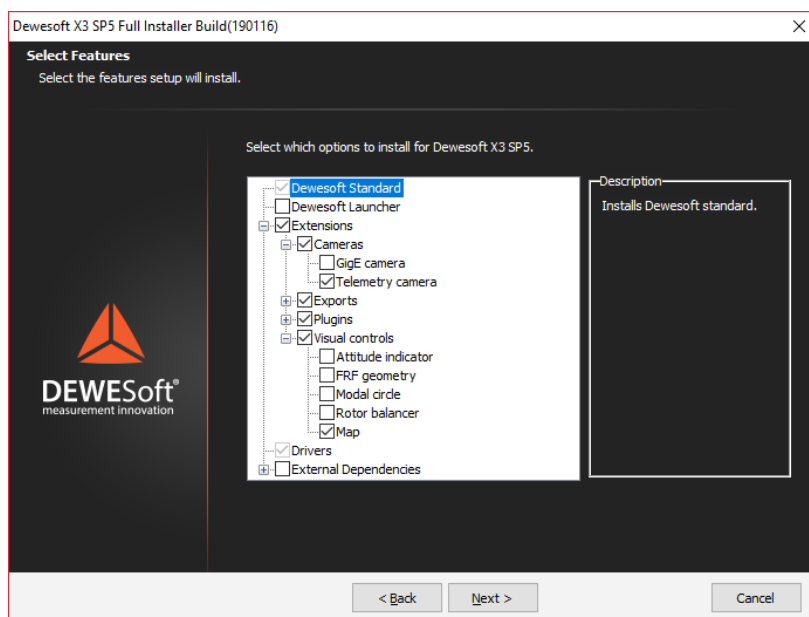

Figure 1: Feature selection

After the installation you can find a "Setup.iss" file in the Windows folder (C:\Windows\Setup.iss). You can move this file to a better location and rename it if you're going to have more than one custom installation type.

4. Using response file with silent installer

To use the .iss file with the silent installer you need to use this command:

```
Setup.exe /s /f1"path\filename.iss" (e.g.  
"C:\Users\Desktop\Installer\Dewesoft_X3_Installer_x64.exe" /s  
/f1"C:\Users\Desktop\Installer\setup.iss")
```

This will install Dewesoft in the background with the same options that were “recorded” in the first step.
