2. About this document

2.1. Legend

The following symbols and formats will be used throughout the document.

**Important**
It gives you important information about the subject.
Please read carefully!

**Hint**
It gives you a hint or provides additional information about a subject.

**Example**
Gives you an example of a specific subject.
3. GPS based system for position, speed, and displacement measurement

3.1 Features

- Synchronized data acquisition combined with real time speed measurement
- Portable and rugged construction
- Insensitivity to road surface (can be used on mud offroad, water, snow, ice,..)
- Mark input for brake trigger switch

3.1.1 Speed sensor

- 100 Hz update rate for speed and distance output
- Supports USB and CAN interface
- Supports differential GPS (SBAS) as standard function
- Online signal quality monitoring for standalone applications
- No calibration required

3.1.2 Clock output

- Output clock rate of up to 10 MHz
- One independent output frequency
- PPS accuracy of 100 ns
- Continuous synchronization to absolute GPS time
- Absolute long time stable

**GNSS**

- Supported navigation systems: GPS L1, L2*, GLONASS L1, L2*
- Supported SBAS systems: WAAS, EGNOS, MSAS, GAGAN, QZSS

**ADDITIONAL FEATURES**

- PPS output ✓
- IRIG B DC output -
- Dual antenna heading -
- RTK positioning ✓

**HARDWARE**

- Interface: RS232 / USB, CAN, Analog, Digital
- Operating voltage: 9 to 36 V
- Power consumption: 250 mA @ 12 V
- Operating temperatures: 0 °C to 60 °C
- Environmental protection: not IP rated
- Input protection: Polarity & short overvoltage protection
- Shock limit: MIL-STD 810 F
- Dimensions: 115 x 93 x 35 mm
- Weight: 740 g

**INERTIAL SENSORS**

- Accelerometer -
- Gyroscope -
- Magnetometer -
- Pressure sensor -

**APPLICATIONS**

- Synchronisation and timing with DewesoftX® DAQ ✓
- Simple positioning ✓
- Brake/Acceleration test ✓
3.3. Device overview

The DS-VGPS-HSC offers a unique combination of a high dynamic GPS based speed sensor and a GPS synchronized time base generator. This combination allows completely synchronized data acquisition of multiple systems located inside and outside of moving vehicles.

The sensitivity of the analog speed and displacement output is free programmable. Due to the 100 Hz update rate the latency time is as low as 9 ms. Using the unique PPS sync technology the latency time of the digital interfaces (USB or CAN) are corrected online.

The base of any GPS receiver is precise time measurement. In addition to the position information a precise PPS (pulse per second) is generated by the GPS engine. This pulse is used to synchronize 80 MHz oscillators with software PLL (phase locked loop). The result is an ultra stable 80 MHz clock source which is completely free of drift over time.

The communication to the host is provided over CAN or standard USB interface.

### 3.4. Functionality of the LEDs

#### 3.4.1. Power (green)

The power LED is solid green when the DS-VGPS-HSC is in normal operation.

#### 3.4.2. Status (red)

<table>

</tr>
</tbody>
</table>

### 3.5. Mounting the aerial

The aerial supplied with the VGPS is designed to be mounted magnetically on top of the vehicle in a horizontal plane. If the surface is not metallic, the aerial may be fixed by placing a piece of strong tape over the top of the aerial. The positioning of the aerial is critical to the correct operation of the VGPS.

Note: For correct operation, the aerial requires a metallic subsurface with a minimal diameter of 15 cm. This surface doesn’t have to be ferromagnetic.

The aerial picks up the signals from up to 12 satellites which are all in different places in the sky. These satellites are not necessarily directly overhead, and can often be close to the horizon. Therefore it is best to mount the aerial in a way that the least amount of metal obscures the view of the sky. On a domed roof, place the aerial on the top of the dome. On an open car with a roll-over bar, place the aerial horizontally on the highest point of the roll-over hoop and tape the wire securely to the frame. Although
the VGPS can work with at least three satellites, its precision increases the more satellites it finds. If one satellite disappears over the horizon, or behind an object, there are other satellites still in view.

3.6. Warm-Up time

When the VGPS is used for the first time, has been moved more than 200 km or not used for 10 hours (since last usage), it is recommended to perform a ‘cold start’. To get the best performance from your VGPS in the future, perform this cold start in an open place with a good all round view to the sky. Allow the VGPS to map the satellites for at least 20 to 30 minutes. The VGPS builds up the ‘Ephemeris’ data on each satellite which is stored in a non-volatile memory, and means future satellite tracking is swift and stable. Once the VGPS has carried out a successful cold start, future satellite lock from power up will take between 15 seconds and 1 minute. Before going to test in a shady environment with tall objects or near to trees, allow the VGPS to settle in an open space for 5 to 10 minutes.

Image 19: VGPS to CAN cable
5.1.11. Output cable velocity and distance

Type of cable: RG-174, length: 2 m

5.2. Options

5.2.1. Brake trigger switch

(Available to purchase as an option)

The brake trigger is designed to be mounted on the brake pedal or the accelerator pedal and gives an indication when the pedal is pressed. The normal method of fixing is via rubber bands. The brake trigger can be used during a brake stop to determine the speed at which the brake pedal was pressed, and the braking distance from this point can be viewed. This switch can be connected directly to an input of the data acquisition system or to the DS-VGPS-HSC. The DS-VGPS-HSC will recognize the exact time of the switching point. A serial command with this time information will be transmitted to the data acquisition unit. DewesoftX® displays this event as a separate channel. This channel can be used during post processing to calculate the brake distance.
5.2.2. Digital display

The LED display is used to monitor various GPS parameters.

Display description:

Blinking middle dashes on all digits - the display is unable to communicate with the VGPS. Pressing and releasing the push-button on the front of the VGPS-Display switches the display to different modes. After pressing the push-button, the LED bedside mode changed to appropriate display mode.

<table>
<thead>
<tr>
<th>Mode 01:</th>
<th>Number of satellites and velocity in mph.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mode 02:</td>
<td>Number of satellites and velocity in kph.</td>
</tr>
</tbody>
</table>

![Digital display image]
Mode 03:
GPS UTC time reported by the satellites goes up in increments of 0.05 seconds. The format is hh.mm.ss. The base for the time is Universal Time Coordinate, derived from the atomic clocks on board the satellite and hence is extremely accurate.

Mode 04:
Heading in degrees. Number of satellites and heading of the vehicle relative to true North. Resolution: 0.1 degree

Mode 05:
Number of satellites and height relative to the Datum WGS84 (approx. 50 meters below UK sea level). Resolution: 0.1 meters
6. Installation of the DewesoftX® measurement software

For optimal operation, we recommend that you install the latest version of DewesoftX®. If you already have DewesoftX® installed, please check if a newer version is already available. You can either check on the website under Support/Downloads/DewesoftX section or directly in software under the Options/Check for updates. In both cases the changelog is included.

![Image 22: Check for updates]

6.1 Connecting the DS-VGPS-HSC to the DAQ-System

6.1.1. Synchronization to system with Clock and Trigger

To synchronize standard data acquisition systems a start trigger and the possibility of external clocking is required. This input needs to be connected to the output of the DS-CLOCK sync signals of the 9-pin DSUB female (signal Scan Clock Output and PPS).

6.2. Configuration of DewesoftX® for the DS-VGPS-HSC

- Start DewesoftX®
- To unlock the GPS functionality in DewesoftX® the GPS has to be configured in the Hardware Setup screen (Settings → Hardware Setup)
- In the hardware setup window select 'GPS' and follow the instructions below:
GPS device
A list of the supported GPS systems. Select the **Dewesoft RS232 (Topcon/Javad/NVS)** GPS device. If it doesn't find the Model of receiver press the Refresh button or you have to switch COM port.

Firmware version
Shows the firmware version of the VGPS system.

Model
Shows the hardware version of the VGPS system.

Serial number
Serial number of the connected GPS sensor. Serial number is recorded to reconstruct the measurement conditions.

Reset receiver
The “Reset receiver” button will reset the internally used receiver. This function has no influence on all settings below.
Update rate (Hz)
Only option is a 100 Hz update rate.

Velocity analog output
The maximum value of the analog output coefficient can be set in this input field. The valid range is between 50 and 500 km/h.

Distance output
Here you can define the number of pulses per meter of the digital distance output. Measuring the frequency of this output also gives a high accuracy speed output. For example if this output is set to 500 pulses per meter a frequency of 1 kHz equals to 2 meters per second (or 7.2 km/h). Selectable ranges are from 10 to 1000 pulses per meter.

CAN output
By clicking on this screen, you enable CAN output. For CAN reading you can also use a .dbc file (DS-VGPSHSC.dbc), which can be downloaded from our website.

Receiver mode
The receiver supports receiving correction (differential mode) signals like WAAS (for USA) or EGNOS (for Europe). It is recommended to enable differential mode to increase the accuracy of the absolute position.
6.2.1. Timing settings

Hardware setup
In addition to a high precision speed sensor the DS-VGPS-HSC is also a high precision timing source for synchronized data acquisition. In this operation mode the DS-VGPS-HSC generates the clock for the data acquisition system.

This operation mode needs to be enabled in the Settings of DewesoftX® (Settings → Devices):

Select External from the Timing device drop down menu. After that you select the PPS In, IRIG B DC out option.

Correction limit
For synchronizing the internal oscillator with the PPS signal at least 4 satellites are required. If the GPS signal is lost during acquisition the DS-VGPS-HSC continues sourcing the data acquisition system with a precision clock source. Without synchronizing to the GPS signal, the oscillator may drift. Therefore the absolute time synchronization can’t be guaranteed anymore. However, as soon the GPS signal is available again, the VGPS-HSC recognizes a possible drift and tries to correct this inaccuracy. If the drift during the free-run time is higher than 100ms, a new data file is automatically generated with exact time stamping.

As soon as the timing device is selected, DewesoftX® automatically sets the data acquisition hardware to external clocking for receiving the sample frequency out of the DS-VGPS-HSC. In addition to this each measurement starts synchronized with the PPS signal. The time information of the data file is taken from GPS-time rather than local PC time.

The actual time from the DS-VGPS-HSC is shown at the right top corner.
**Green watch:** The number of used satellites is equal or greater than the minimum number of satellites.

**Red watch and Sync Lost indicator:** The number of used satellites is lower than the minimum number of satellites.

The time next to the clock symbol is the GPS time used for the timestamp and clock generation.

*Image 26: GPS screen*
6.3. Channel setup

When you are finished in the hardware settings, click on the ‘Ch. setup’ button and select ‘GPS’.

The screenshot below shows the channel setup screen of the DS-VGPS-HSC. In the column ON/OFF you can select the channels for storing during the measurement. The default channel names are displayed in the column NAME. You can change them with a double click on it. Beside the channel names the actual value is displayed.

- **X absolute**: Longitude component of position in degrees, minutes and fraction of minutes
- **Y absolute**: Latitude component of position in degrees, minutes and fraction of minutes
- **Z**: Altitude in meters above sea level
- **Velocity**: Speed over ground (vector of all 3 dimensions)
- **Velocity Z**: Speed in the Z direction
- **Direction**: True track over ground
- **Distance**: Integration of speed for getting the displacement (Only speed levels above 0.5 km/h are used to calculate the distance)
- **Used satellites**: Numbers of satellites used for calculation of position and speed
Current sec: This channel counts the seconds since midnight UTC
Mark input: Indicates an event at the mark input by changing the level from 0 to 1
Acceleration: Based on the GPS velocity, the acceleration is calculated automatically
GPS fix quality: To recognize in which mode the receiver is (Standalone, DGPS, RTK)

The circle at the right gives an overview of the satellites in view of the GPS receiver and which of them are used from the receiver. The color of the shown satellites indicates the signal strength of them. From gray to dark green which is the strongest density. Satellites shown in the center of the circle are directly above the GPS-aerial. Satellites shown at the border of the circle are near the horizon.

The field <PPS sync> changes the color from gray to green depending if the appropriate feature is available at the moment.

The PPS sync is used for hardware synchronization to analog channels. This will eliminate the time shift caused due to calculation time of the GPS receiver and of the data transfer time of the RS-232 port.

6.4. Measurement

Now you are ready for measuring. Clicking the “Measure” button opens the measurement screen.

With the “Store” and “Stop” button in the recorder you can control the measurement manually.
6.5. Analysis

After measurement you can analyze the stored data. One click on the “Analysis” button gives you the possibility to choose a recorded data file and analyze it.

Use the cursor functions to zoom in/out, cut out and print out. With the “Export” function you can export data to other applications, like Excel, Word etc.

7. Warranty information

Notice
The information contained in this document is subject to change without notice.

Note:
Dewesoft d.o.o. shall not be liable for any errors contained in this document. Dewesoft MAKES NO WARRANTIES OF ANY KIND WITH REGARD TO THIS DOCUMENT, WHETHER EXPRESS OR IMPLIED. DEWESOFT SPECIFICALLY DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Dewesoft shall not be liable for any direct, indirect, special, incidental, or consequential damages, whether based on contract, tort, or any other legal theory, in connection with the furnishing of this document or the use of the information in this document.

The copy of the specific warranty terms applicable to your Dewesoft product and replacement parts can be obtained from your local sales and service office. To find a local dealer for your country, please visit https://dewesoft.com/support/distributors.

7.1. Calibration
Every instrument needs to be calibrated at regular intervals. The standard norm across nearly every industry is annual calibration. Before your Dewesoft data acquisition system is delivered, it is calibrated. Detailed calibration reports for your Dewesoft system can be requested. We retain them for at least one year, after system delivery.

7.2. Support
Dewesoft has a team of people ready to assist you if you have any questions or any technical difficulties regarding the system. For any support please contact your local distributor first or Dewesoft directly.

Dewesoft d.o.o.
Gabrsko 11a
1420 Trbovlje Slovenia

Europe Tel.: +386 356 25 300
Web: http://www.dewesoft.com
The telephone hotline is available Monday to Friday from 07:00 to 16:00 CET (GMT +1:00)

7.3. Service/repair
The team of Dewesoft also performs any kinds of repairs to your system to assure a safe and proper operation in the future. For information regarding service and repairs please contact your local distributor first or Dewesoft directly on https://dewesoft.com/support/rma-service.

7.4. Restricted Rights
Use Slovenian law for duplication or disclosure. Dewesoft d.o.o. Gabrsko 11a, 1420 Trbovlje, Slovenia / Europe.

When used in text representing the company, product or technology name, the ® sign is not used. The Dewesoft triangle logo is a registered trademark but the ® sign is not used in the visual representation of the triangle logo.
8. Safety instructions
Your safety is our primary concern! Please be safe!

8.1. Safety symbols in the manual

- **Warning**: Calls attention to a procedure, practice, or condition that could cause the body injury or death

- **Caution**: Calls attention to a procedure, practice, or condition that could possibly cause damage to equipment or permanent loss of data.

8.2. General Safety Instructions

- **Warning**: The following general safety precautions must be observed during all phases of operation, service, and repair of this product. Failure to comply with these precautions or with specific warnings elsewhere in this manual violates safety standards of design, manufacture, and intended use of the product. Dewesoft GmbH assumes no liability for the customer’s failure to comply with these requirements.

All accessories shown in this document are available as an option and will not be shipped as standard parts.

8.2.1. Environmental Considerations
Information about the environmental impact of the product.

8.2.2. Product End-of-Life Handling
Observe the following guidelines when recycling a Dewesoft system:

8.2.3. System and Components Recycling
Production of these components required the extraction and use of natural resources. The substances contained in the system could be harmful to your health and to the environment if the system is improperly handled at its end of life! Please recycle this product in an appropriate way to avoid unnecessary pollution of the environment and to keep natural resources.

This symbol indicates that this system complies with the European Union’s requirements according to Directive 2002/96/EC on waste electrical and electronic equipment (WEEE). Please find further information about recycling on the Dewesoft web site

www.dewesoft.com

Restriction of Hazardous Substances
This product has been classified as Monitoring and Control equipment and is outside the scope of the 2002/95/EC RoHS Directive. However, we take care of our environment and the product is lead-free.

8.2.4. General safety and hazard warnings for all Dewesoft systems

Safety of the operator and the unit depend on following these rules.

- Use this system under the terms of the specifications only to avoid any possible danger.
- Read your manual before operating the system.
- Observe local laws when using the instrument.
- DO NOT touch internal wiring!
- DO NOT use higher supply voltage than specified!
- Use only original plugs and cables for harnessing.
- You may not connect higher voltages than rated to any connectors.
- The power cable and connector serve as Power-Breaker. The cable must not exceed 3 meters, the disconnect function must be possible without tools.
- Maintenance must be executed by qualified staff only.
- During the use of the system, it might be possible to access other parts of a more comprehensive system. Please read and follow the safety instructions provided in the manuals of all other components regarding warning and security advice for using the system.
- With this product, only use the power cable delivered or defined for the host country.
- DO NOT connect or disconnect sensors, probes or test leads, as these parts are connected to a voltage supply unit.
- Ground the equipment: For Safety Class 1 equipment (equipment having a protective earth terminal), a non-interruptible safety earth ground must be provided from the mains power source to the product input wiring terminals.
- Please note the characteristics and indicators on the system to avoid fire or electric shocks. Before connecting the system, please read the corresponding specifications in the product manual carefully.
- The inputs must not, unless otherwise noted (CATx identification), be connected to the main circuit of category II, III and IV.
- The power cord separates the system from the power supply. Do not block the power cord, since it has to be accessible for the users.
- DO NOT use the system if equipment covers or shields are removed.
- If you assume the system is damaged, get it examined by authorized personnel only.
- Adverse environmental conditions are Moisture or high humidity Dust, flammable gases, fumes or dissolver Thunderstorm or thunderstorm conditions (except assembly PNA) Electrostatic fields, etc.
- The measurement category can be adjusted depending on module configuration.
- Any other use than described above may damage your system and is attended with dangers like short-circuiting, fire or electric shocks.
- The whole system must not be changed, rebuilt or opened.
- DO NOT operate damaged equipment: Whenever it is possible that the safety protection features built into this product have been impaired, either through physical damage, excessive moisture, or any other reason, REMOVE POWER and do not use the product until the safe operation can be verified by service-trained personnel. If necessary, return the product to Dewesoft sales and service office for service and repair to ensure that safety features are maintained.
- If you assume a more riskless use is not provided anymore, the system has to be rendered inoperative and should be protected against inadvertent operation. It is assumed that a more riskless operation is not possible anymore if the system is damaged obviously or causes strange
noises. the system does not work anymore. the system has been exposed to long storage in adverse environments. the system has been exposed to heavy shipment strain.

- Warranty void if damages caused by disregarding this manual. For consequential damages, NO liability will be assumed!
- Warranty void if damage to property or persons caused by improper use or disregarding the safety instructions.
- Unauthorized changing or rebuilding the system is prohibited due to safety and permission reasons (CE).
- Be careful with voltages >25 VAC or >35 VDC! These voltages are already high enough in order to get a perilous electric shock by touching the wiring.
- The product heats during operation. Make sure there is adequate ventilation. Ventilation slots must not be covered!
- Only fuses of the specified type and nominal current may be used. The use of patched fuses is prohibited.
- Prevent using metal bare wires! Risk of short circuit and fire hazard!
- DO NOT use the system before, during or shortly after a thunderstorm (risk of lightning and high energy over-voltage). An advanced range of application under certain conditions is allowed with therefore designed products only. For details please refer to the specifications.
- Make sure that your hands, shoes, clothes, the floor, the system or measuring leads, integrated circuits and so on, are dry.
- DO NOT use the system in rooms with flammable gases, fumes or dust or in adverse environmental conditions.
- Avoid operation in the immediate vicinity of high magnetic or electromagnetic fields, transmitting antennas or high-frequency generators, for exact values please refer to enclosed specifications.
- Use measurement leads or measurement accessories aligned with the specification of the system only. Fire hazard in case of overload!
- Do not switch on the system after transporting it from a cold into a warm room and vice versa. The thereby created condensation may damage your system. Acclimatise the system unpowered to room temperature.
- Do not disassemble the system! There is a high risk of getting a perilous electric shock. Capacitors still might be charged, even if the system has been removed from the power supply.
- The electrical installations and equipment in industrial facilities must be observed by the security regulations and insurance institutions.
- The use of the measuring system in schools and other training facilities must be observed by skilled personnel.
- The measuring systems are not designed for use in humans and animals.
- Please contact a professional if you have doubts about the method of operation, safety or the connection of the system.
- Please be careful with the product. Shocks, hits and dropping it from already-lower level may damage your system.
- Please also consider the detailed technical reference manual as well as the security advice of the connected systems.
- This product has left the factory in safety-related flawlessness and in proper condition. In order to maintain this condition and guarantee safety use, the user has to consider the security advice and warnings in this manual.

EN 61326-3-1:2008
IEC 61326-1 applies to this part of IEC 61326 but is limited to systems and equipment for industrial applications intended to perform safety functions as defined in IEC 61508 with SIL 1-3.
The electromagnetic environments encompassed by this product family standard are industrial, both indoor and outdoor, as described for industrial locations in IEC 61000-6-2 or defined in 3.7 of IEC 61326-1.

Equipment and systems intended for use in other electromagnetic environments, for example, in the process industry or in environments with potentially explosive atmospheres, are excluded from the scope of this product family standard, IEC 61326-3-1.

Devices and systems according to IEC 61508 or IEC 61511 which are considered as “operationally well-tried”, are excluded from the scope of IEC 61326-3-1.

Fire-alarm and safety-alarm systems, intended for the protection of buildings, are excluded from the scope of IEC 61326-3-1.
